

Mark the World 1st Network Packet Forensic Analysis Certified Training (Istanbul/Turkey)

Computer Forensic has been the main tools for most forensic investigators in conducting their forensic analysis job on hard-disk, cell phone and any devices which contain the evidences for court proceeding.

In the recent years, the market trend has shifted to cyber forensic due to the emerging and fast changing of Internet technology and cyber attacks in the world.

In anticipating and preparing forensic investigators to well equip with the essential knowledge and skills to tackling the cybercrime and any network related frauds, the Global Training Division of Decision Computer Group has specially developed the NPFAT certification training course with hands-on application using network forensic tools from freeware and E-Detective software. The objective is for all students to have the real life experience from what they have learned in the class.

Our first launch of the NPFAT training course was at Istanbul/Turkey between Jul 15 and 17, 2009. The reason why we have chosen this location to launch our world 1st NPFAT certification training course is Turkey is the strategic location for both Europe and Asia.

The class was over-wimble with students come from Turkey and Pakistan Police dept. Military Intelligence, Law Enforcement Agencies, Security from President and Prime Minister's office.

This is a good success for Decision Computer Group who is the first time organizing such certified training.

Some feedback from the students from the course evaluation:

1. *Theory and practical are together. That is good for person who doesn't know anything about network forensic.*
2. *Webmail section is good*
3. *The course prefer to be the language of Turkish*
4. *We learn lots about wireless interception with WEP & WPA cracking.*
5. *This course is very good for computer forensic investigator to learn about the new knowledge of Network forensic investigation.*

Training centers available for immediate registration are Taipei/Taiwan, Singapore and Turkey.

We will announce the other locations of training centre when it makes available to the students.
